

Additional Practice on solving Quadratic and Linear Systems

Solve each system Algebraically and Graphically

1.
 $y = 2x + 6$
 $y = x^2 + 4x + 3$

2.
 $2y - 2x = 10$
 $y = x^2 + 2x + 3$

3.
 $y = x + 1$
 $y = (x - 1)^2$

4.
 $y + 1 = -2x$
 $y = -x^2 - 2x + 3$

5.
 $y = 3x - 1$
 $2x + y = 4$

6.
 $2x + 3y = -4$
 $3x + y = 8$
