Even and Odd Functions

A <u>Function</u> can be classified as **Even**, **Odd** or **Neither**. This classification can be determined *graphically* or *algebraically*.

Graphical Interpretation -

Even Functions:

Have a graph that is symmetric with respect to the **Y-Axis.**

Odd Functions:

Have a graph that is symmetric with respect to the **Origin**.

Origin – If you spin the picture upside down about the Origin, the graph looks the same!

Algebraic Test – Substitute (-x) in for x <u>everywhere</u> in the function and analyze the results of f(-x), by comparing it to the original function f(x).

- **Even Function:** y = f(x) is *Even* when, for each x in the domain of f(x), f(-x) = f(x)
- **Odd Function:** y = f(x) is **Odd** when, for each x in the domain of f(x), f(-x) = -f(x)

Examples:

a. $f(x) = x^2 + 4$ b. $f(x) = x^3 - 2x$ c. $f(x) = x^2 - 3x + 4$ $f(-x) = (-x)^2 + 4$ $f(-x) = (-x)^3 - 2(-x)$ $f(x) = (-x)^2 - 3(-x) + 4$ $f(-x) = x^2 + 4$ $f(-x) = (-x)^3 - 2(-x)$ $f(x) = (-x)^2 - 3(-x) + 4$ $f(-x) = x^2 + 4$ $f(-x) = -x^3 + 2x$ $f(-x) = x^2 + 3x + 4$ f(-x) = f(x) $f(-x) = -(x^3 - 2x) = -f(x)$ $f(-x) \neq f(x) \neq -f(x)$ f(-x) = f(x) $f(-x) = -(x^3 - 2x) = -f(x)$ $f(-x) \neq f(x) \neq -f(x)$ $f(-x) = x^2 + 3x + 4$ $f(-x) = -(x^3 - 2x) = -f(x)$ $f(-x) \neq f(x) \neq -f(x)$ $f(-x) = x^2 + 3x + 4$ $f(-x) = -(x^3 - 2x) = -f(x)$ $f(-x) = x^2 + 3x + 4$ f(-x) = f(x) $f(-x) = -(x^3 - 2x) = -f(x)$ $f(-x) \neq f(x) \neq -f(x)$ $f(-x) = x^2 + 3x + 4$ $f(-x) = x^2 + 3x + 4$ $f(-x) = x^2 + 3x + 4$ f(-x) = f(x) $f(-x) = -(x^3 - 2x) = -f(x)$ $f(-x) = x^2 + 3x + 4$ $f(-x) = x^2 + 3x$

Even and Odd Functions - Practice Problems

A. Graphically determine whether the following functions are Even, Odd, or Neither

B. Algebraically determine whether the following functions are Even, Odd, or Neither

- 1. $f(x) = x^3 x^2 + 4x + 2$ 2. $f(x) = -x^2 + 10$ 3. $f(x) = x^3 + 4x$ 4. $f(x) = -x^3 + 5x - 2$ 5. $f(x) = \sqrt{x^4 - x^2} + 4$ 6. f(x) = |x + 4|7. f(x) = |x| + 48. $f(x) = x^4 - 2x^2 + 4$ 9. $f(x) = \sqrt[3]{x}$ 10. $f(x) = x\sqrt{x^2 - 1}$
- 11. Given the point (2, -5) is on the graph of f(x).

A) If f(x) is an even function, what is another point that is on the graph of f(x)?

B) If f(x) is an odd function, what is another point that is on the graph of f(x)?

11.

A) (-2, -5)

B) (-2, 5)

Answers:

Section A (Graphs)

- 1. Odd
- 2. Neither
- 3. Even

- Section B (Algebra)
- 1. Neither
- 2. Even
- 3. Odd
- 4. Neither
- 5. Even
- 6. Neither
- 7. Even
- 8. Even
- 9. Odd
- 10. Odd
