

# Free-Response Questions Scoring Guidelines

## Scoring Guidelines for Question 1: Function Concepts Part A: Graphing calculator required

6 points

$x$	1	2	3	4	5
$f(x)$	1	3	5	3	1

The domain of  $f$  consists of the five real numbers 1, 2, 3, 4, and 5. The table defines the function  $f$  for these values. The function  $g$  is given by  $g(x) = 2\ln x$ .

### Model Solution

### Scoring

- (A) (i) The function  $h$  is defined by  $h(x) = (g \circ f)(x) = g(f(x))$ . Find the value of  $h(4)$  as a decimal approximation, or indicate that it is not defined.

(ii) Find all values of  $x$  for which  $f(x) = 3$ , or indicate there are no such values.

(i)  $h(4) = g(f(4)) = g(3) = 2\ln 3 = 2.197$

Value

**1 point**  
2.A

(ii) From the table,  $f(x) = 3$  when  $x = 2$  and  $x = 4$ .

Values

**1 point**  
2.A

**Total for part (A)**

**2 points**

- (B) (i) Find all values of  $x$ , as decimal approximations, for which  $g(x) = 3$ , or indicate there are no such values.

(ii) Determine the end behavior of  $g$  as  $x$  increases without bound. Express your answer using the mathematical notation of a limit.

(i)  $g(x) = 3 \Rightarrow 2\ln x = 3$   
 $x = 4.482$  (OR 4.481)

Answer

**1 point**  
1.A

(ii) The function  $g$  is increasing. As  $x$  increases without bound,  $g(x)$  increases without bound. Therefore,  $\lim_{x \rightarrow \infty} g(x) = \infty$ .

End behavior with limit notation

**1 point**  
3.A

**Total for part (B)**

**2 points**

- (C) (i) Determine if  $f$  has an inverse function.

(ii) Give a reason for your answer based on the definition of a function and the table of values of  $f(x)$ .

(i)  $f$  does not have an inverse function on its domain of the five real numbers 1, 2, 3, 4, and 5.

Answer

**1 point**  
1.C

(ii) There are output values of  $f$  that are not mapped from unique input values. (The function  $f$  is not one-to-one.) Because  $f(1) = 1$  and  $f(5) = 1$ , the inverse function on this domain does not exist.

Reason

**1 point**  
3.C

A reason that only states "fails the horizontal line test" is not sufficient.

**Part A: Graphing calculator required**

**6 points**

An ecologist began studying a certain type of plant species in a wetlands area in 2013. In 2015 ( $t = 2$ ), there were 59 plants. In 2021 ( $t = 8$ ), there were 118 plants.

The number of plants in this species can be modeled by the function  $P$  given by  $P(t) = ab^t$ , where  $P(t)$  is the number of plants during year  $t$ , and  $t$  is the number of years since 2013.

Model Solution	Scoring
<p><b>(A)</b> (i) Use the given data to write two equations that can be used to find the values for constants <math>a</math> and <math>b</math> in the expression for <math>P(t)</math>.</p> <p>(ii) Find the values for <math>a</math> and <math>b</math> as decimal approximations.</p>	
<p>(i) Because <math>P(2) = 59</math> and <math>P(8) = 118</math>, two equations to find <math>a</math> and <math>b</math> are</p> $ab^2 = 59$ $ab^8 = 118.$	<p>Two equations <b>1 point</b> 1.C</p>
<p>(ii)</p> $a = \frac{59}{b^2} \Rightarrow \left(\frac{59}{b^2}\right)b^8 = 118$ $b = \left(\frac{118}{59}\right)^{1/6} = 1.122462$ $a = 46.828331$ $P(t) = 46.828(1.122)^t$	<p>Values of <math>a</math> and <math>b</math> <b>1 point</b> 1.C</p>
<p><b>Total for part (A) 2 points</b></p>	
<p><b>(B)</b> (i) Use the given data to find the average rate of change of the number of plants, in plants per year, from <math>t = 2</math> to <math>t = 8</math> years. Express your answer as a decimal approximation. Show the computations that lead to your answer.</p> <p>(ii) Use the average rate of change found in (i) to estimate the number of plants for <math>t = 10</math> years. Show the work that leads to your answer.</p> <p>(iii) The average rate of change found in (i) can be used to estimate the number of plants during year <math>t</math> for <math>t &gt; 10</math> years. Will these estimates, found using the average rate of change, be less than or greater than the number of plants predicted by the model <math>P</math> during year <math>t</math> for <math>t &gt; 10</math> years? Explain your reasoning.</p>	
<p>(i) <math>\frac{P(8) - P(2)}{8 - 2} = \frac{(118 - 59)}{6} = 9.833327</math></p> <p>The average rate of change is 9.833 plants per year.</p>	<p>Average rate of change <b>1 point</b> 1.B</p>
<p>(ii) The average rate of change is</p> $r = \frac{P(8) - P(2)}{8 - 2} = 9.833327.$ <p>The secant line between point <math>(2, P(2))</math> and point</p>	<p>Estimate using average rate of change <b>1 point</b> 3.B</p>

$$(8, P(8)) \text{ is given by } y = y_1 + \left( \frac{P(8) - P(2)}{8 - 2} \right) (x - x_1),$$

where  $(x_1, y_1)$  can be either one of the points.

Estimates using the average rate of change are given by

$$y = P(2) + r(x - 2)$$

OR

$$y = P(8) + r(x - 8).$$

Both of these produce the same estimate.

For  $x = 10$ ,

$$y = 59 + r(10 - 2) = 137.667.$$

The number of plants for  $t = 10$  years was approximately 137 or 138.

(iii) The estimate using the average rate of change is the  $y$ -coordinate of a point on the secant line that passes through  $(2, P(2))$  and  $(8, P(8))$ . Because the graph of  $P$  is concave up on the interval  $(-\infty, \infty)$ , the secant line is below the graph of  $P$  outside of the interval  $(2, 8)$ .

Therefore, the estimate using the average rate of change is less than the value of  $P(t)$  for  $t > 10$ .

- (C) For which  $t$ -value,  $t = 6$  years or  $t = 20$  years, should the ecologist have more confidence in when using the model  $P$ ? Give a reason for your answer in the context of the problem.

The ecologist should have more confidence in using the model for  $t = 6$  years. There is insufficient information to know how many years the exponential model can be extended above the maximum time provided in the data ( $t = 8$ ) to make reasonable predictions. On the other hand, it is appropriate to use the regression model to estimate values at times that fall between the minimum time ( $t = 2$ ) and the maximum time ( $t = 8$ ) provided in the data.

Note: Figure not drawn to scale.

The figure shows a clock standing on a level floor with a close-up view of the clock face. The clock face has a 10-centimeter-long moving hour hand. The center of the clock face is 200 centimeters from the floor. At time  $t=0$  hours, the hour hand is pointing directly up to the 12. The next time the hour hand points directly up to the 12 is at time  $t=12$  hours. As the hour hand moves, the distance of the endpoint of the hour hand from the floor periodically decreases and increases.

The sinusoidal function  $h$  models the distance, in centimeters, of the endpoint of the hour hand from the floor as a function of time  $t$  in hours.

**Model Solution**

**Scoring**

- (A) The graph of  $h$  and its dashed midline for two full cycles is shown. Five points,  $F$ ,  $G$ ,  $J$ ,  $K$ , and  $P$ , are labeled on the graph. No scale is indicated, and no axes are presented.

Determine possible coordinates  $(t, h(t))$  for the five points:  $F$ ,  $G$ ,  $J$ ,  $K$ , and  $P$ .

$F$  has coordinates  $(0, 210)$ .

$G$  has coordinates  $(3, 200)$ .

$J$  has coordinates  $(6, 190)$ .

$K$  has coordinates  $(9, 200)$ .

$P$  has coordinates  $(12, 210)$ .

Note:  $t$ -coordinates will vary. A correct set of coordinates for one full cycle of  $h$  as pictured is acceptable.

(C) Refer to the graph of  $h$  in part (A). The  $t$ -coordinate of  $J$  is  $t_1$ , and the  $t$ -coordinate of  $K$  is  $t_2$ .

(i) On the interval  $(t_1, t_2)$ , which of the following is true about  $h$ ?

- a.  $h$  is positive and increasing.
- b.  $h$  is positive and decreasing.
- c.  $h$  is negative and increasing.
- d.  $h$  is negative and decreasing.

(ii) Describe how the rate of change of  $h$  is changing on the interval  $(t_1, t_2)$ .

(i) Choice a.	Function behavior <span style="float: right;"><b>1 point</b> 2.A</span>
(ii) Because the graph of $h$ is concave up on the interval $(t_1, t_2)$ , the rate of change of $h$ is increasing on the interval $(t_1, t_2)$ .	Change in rate of change <span style="float: right;"><b>1 point</b> 3.A</span>

**Directions:**

- Unless otherwise specified, the domain of a function  $f$  is assumed to be the set of all real numbers  $x$  for which  $f(x)$  is a real number. Angle measures for trigonometric functions are assumed to be in radians.
- Solutions to equations must be real numbers. Determine the exact value of any expression that can be obtained without a calculator. For example,  $\log_2 8$ ,  $\cos\left(\frac{\pi}{2}\right)$ , and  $\sin^{-1}(1)$  can be evaluated without a calculator.
- Unless otherwise specified, combine terms using algebraic methods and rules for exponents and logarithms, where applicable. For example,  $2x + 3x$ ,  $5^2 \cdot 5^3$ ,  $\frac{x^5}{x^2}$ , and  $\ln 3 + \ln 5$  should be rewritten in equivalent forms.
- For each part of the question, show the work that leads to your answers.

**Model Solution**

**Scoring**

(A) The functions  $g$  and  $h$  are given by

$$g(x) = \log_4(2x)$$

$$h(x) = \frac{(e^x)^5}{e^{1/4}}$$

(i) Solve  $g(x) = 3$  for values of  $x$  in the domain of  $g$ .

(ii) Solve  $h(x) = e^{1/2}$  for values of  $x$  in the domain of  $h$ .

(i)  $g(x) = 3$

$$\log_4(2x) = 3$$

$$4^3 = 2x$$

$$x = \frac{4^3}{2} = 32$$

Solution to  $g(x) = 3$

**1 point**
