

Part A: Using Linear Functions [F-CED.A.2]

Answer the questions completely.	
<p>1. Rewrite the linear function $-3x - 5y + 10 = 0$ into slope-intercept form.</p>	<p>2. For each of the points given, determine if the point is a solution to the linear inequality $y > 5x - 1$.</p> <p style="text-align: center;">A (-3, -16) B (3, 1)</p>

Part B: Writing Linear Functions [F-CED.A.2]

Answer the questions completely.	
<p>3. Write the equation of the line that contains the point (-2, 4) with slope $\frac{3}{2}$.</p>	<p>4. Write the equation of the line, in <i>slope-intercept form</i>, that contains points (3, 4) and (-2, 14).</p>
<p>5. Circle the equation that <u>does not</u> describe the line with slope of -3 that contains the point (2, 0).</p> <p>a) $y - 0 = -3(x - 2)$ c) $y = -3x + 6$</p> <p>b) $(y - 2) = -3x + 0$ d) $6 = 3x + y$</p>	<p>6. Write a linear equation that has a slope of 0.</p>

Part C: Linear Inequalities [A-REI.D.12]

Answer the questions completely.	
<p>7. Write an inequality in slope intercept form that represents the graph below.</p> 	<p>8. Circle the correct graph of the linear inequality $2y + 6 > 4x$</p> 

Part F: Creating Linear Functions [F-CED.A.2]

Answer the questions completely.

9. A golf course charges \$40 for a full game of golf and sells buckets of golf balls for \$20. The golf course would like to make \$400 by the end of the day.

A) **Assign** variables and **write** an equation that represents this situation.

B) **Graph** your equation.

Label and scale the axes appropriately.

C) Suppose every customer that comes in have his or her own golf balls. How many games would the golf course have to sell to cover the \$400, if no buckets of gold balls are sold?

10. Use the graph below to answer the questions.

A) **Write** the domain of the function.

B) **Find and interpret** the x-intercept.

C) **Find and interpret** the y-intercept.

D) **Find and interpret** the slope.

Part G: Essential Question

Write a Big Idea response for the Essential Question. **Include** vocabulary terms you have learned. Your responses will be evaluated using the Big Ideas Scoring Guide.

11. **Explain** how to determine when to use an equation or an inequality.
